

Stress happens. Don't let it cost you.

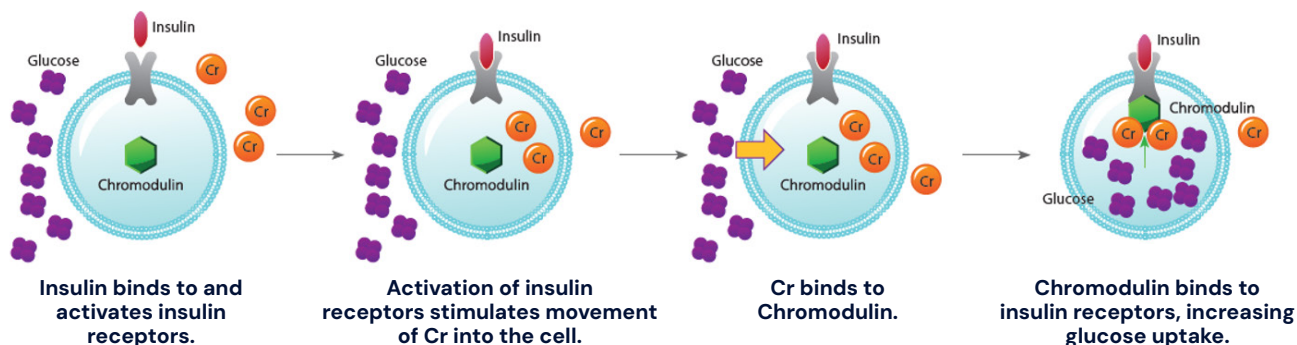

Feed is one of the largest costs in animal production. But when animals face stress from their environment like heat, transition, weaning, transport, disease challenge, or production demand, they don't always get as much from their feed as they could.

Nutrilock® Chromium helps insulin work more effectively, allowing more glucose to move into cells where it can be used for energy.

More Energy Supports:

-  Growth
-  Milk Production
-  Reproduction
-  Immune health
-  Resilience during stress

How Nutrilock® Chromium Works:

Benefits Across Species

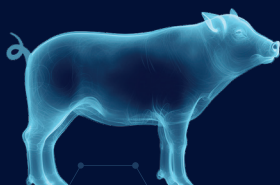

Dairy

- ✓ Increases milk production when supplemented through late lactation¹
- ✓ Improves reproductive performance
- ✓ Improves immune health

Swine

- ✓ Improves ADG and feed-to-gain ratio
- ✓ Supports reproductive performance
- ✓ Has been linked to high conception rates and litter sizes²

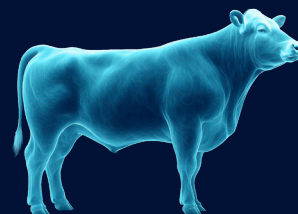

Poultry

- ✓ Increases final body weight
- ✓ Improves feed conversion rate
- ✓ Helps birds manage heat stress

Beef

- ✓ Optimizes feed efficiency
- ✓ Improves immune health
- ✓ More energy available for breeding back

Nutrilock[®] Chromium helps support livestock animals through these challenges by helping them get more out of the feed they consume.

Quality Matters at Chemlock Nutrition

Unlike cheaper competitors, Nutrilock[®] Chromium is **100% manufactured in the USA** from start to finish. The Chemlock Standard[™] quality program ensures that you can trust every batch, every time.

- Every batch is tested for purity and consistency in a third-party/independent lab
- Production facility is SF/SF and GMP certified
- Certified organic option available

Superior Chemistry x Superior Quality = Superior Ingredients

Chemistry is essential in formulating products. At Chemlock Nutrition, we optimize product performance and functionality by understanding chemical reactions, kinetics, and material properties. Chemistry is the foundation of our company and product development.
